

Syllabus – B.Tech. Computer Science & Engineering

NMAMIT, Nitte • Cohort-aware source summary

Cohort/source note

NMAMIT's CSE department page currently links a specific 2024–28 CSE syllabus/regulations document. The link is included below. Because that Google Drive document was not text-readable through the public web reader, the semester-wise course list in this PDF is explicitly labeled as the accessible official 2023–27 CSE curriculum reference, not as a fabricated 2024–28 list. Use the 2024–28 source link for final cohort-level ingestion.

Program-level learning outcomes

- PEO 1: Apply principles of Computer Science & Engineering, Mathematics and scientific investigation to solve discipline-appropriate problems.
- PEO 2: Contribute to the profession and society.
- PEO 3: Work in computing professions or pursue higher education.
- PSO 1: Apply engineering science and mathematics foundations to appropriate CSE problems.
- PSO 2: Apply computing knowledge in hardware/software aspects to real-world engineering problems.
- PSO 3: Design and develop algorithms, programs and projects using appropriate modern tools.

Accessible official CSE curriculum reference: 2023–27

Semester	Subjects / curriculum items	Credits
I	Calculus & Differential Equations; Quantum Computing & Modern Physics; Introduction to Python Programming; Basic Electronics; Fundamentals of Cyber Security	15
II	Discrete Mathematics & Transform Techniques; Materials Chemistry for Computer Systems; Applied Digital Logic Design; Introduction to C Programming	15
I/II combined	Mandatory Internship-I (80–90 hours)	2
III	Statistics & Probability; Data Structures; Object Oriented Programming; Computer Organization & Architecture; Front End Web Development; Data Analytics	16
IV	Linear Algebra & Applications; Design & Analysis of Algorithms; Microprocessor & Embedded Systems; Software Engineering & Project Management; Database Management Systems	15
V	Computer Network & Communication; Operating Systems; Theory of Computation; Java & Spring Framework; Professional Elective-I; Introduction to Entrepreneurship	16
VI	Machine Learning; Compiler Design; Compiler Design Lab; Professional Elective-II; Professional Elective-III; Open Elective-I; Management & Entrepreneurship	16
VII	Computer Graphics & Visualization; Mobile App Development Lab; Professional Elective-IV; Professional Elective-V; Open Elective-II; Financial Management	16
VIII	Internship-II; Major Project Phase-II	16

Modules/units and individual course outcomes

The full official syllabus contains course-specific modules/units, teaching hours, assessment scheme and course outcomes. This compilation intentionally does not invent or paraphrase those detailed COs where the cohort-specific 2024–28 document could not be directly read. For an AI assistant, ingest the official 2024–28 PDF as the authoritative source and retain course code + course title + module headings + CO statements verbatim.
